Education

10/2025 - Present	Master of Science in Applied Computer Science Deggendorf Institute of Technology, Bavaria, Germany
2021 - 2025	Bachelor of Engineering in Information Science and Engineering Ramaiah Institute Of Technology, Bengaluru, India CGPA: 8.1/10
2018 - 2020	Karnataka School Examination and Assessment Board (KSEAB) Jnanasudha Pre-University College, Karkala, India Score: 91%

Professional Career

11/2022 - 07/2025	Software Engineer (Intern) Celebto Tech, Bengaluru, India Full-stack intern across travel-tech products, owning frontend, backend, and cloud infrastructure end-to-end across two stints. Built an itinerary service platform (TypeScript, React, Kotlin, Spring Boot), improving UX by 35% and operational efficiency by 30% Designed place and activity ranking algorithms based on user preferences and search behaviour, directly powering core product discovery. Engineered secure authentication (Firebase, OAuth, GCP RBAC) and optimised CI/CD pipelines and Docker deployment, cutting errors by 40%
--------------------------	--

Notable Projects

04/2026 - 05/2026	Pitwall-F1 Immersive Website Full-stack F1 analytics platform with real-time race replay, live standings, telemetry charts, and multi-driver lap comparisons. Lets fans re-experience races with accurate positional data for all 20 cars, eliminating manual data formatting and static visualizations. FastAPI SSE streams NumPy-interpolated pre-rendered frames (~10,000/race) to a Next.js 15 frontend; CSS transition: 90ms achieves 60 fps from 10 fps data — no WebGL.
--------------------------	--

Notable Projects

01/2026 - 03/2026

Liquor Inventory Management System

- Built blind mobile audit scanner, preventing staff from seeing expected stock counts, eliminating pre-scan manipulation fraud.
- Architected 3-tier role system (Owner → Manager → Staff) with JWT authentication and JTI-based token revocation for secure session control.
- Engineered snapshot-based stock freezing and cross-store injection blocking, making audit data tamper-proof for government inspectors.
- Delivered a real-time dashboard with calendar view and a bottle-level discrepancy matrix for instant stock loss detection.
- Automated PDF compliance report generation with manager sign-off workflow, producing legally verifiable audit records.

HackZion Hackathon, 2023

HealthGuard (Allergy Detection System)

- Used Mistral and Llama 2 to convert natural language food and cosmetic preferences into structured allergen filters via conversational input.
- Built an EasyOCR-powered product scanner, extracting ingredient lists from photos and cross-referencing against user allergen profiles in real time via Streamlit
- Engineered Python web scraper building a live ingredient knowledge base from Open Food Facts, eliminating manual database maintenance.
- Implemented 3-tier analysis pipeline (Llama 2, scikit-learn ML, rule-based fallback), ensuring reliable allergen classification despite open-source model inconsistencies.
- Won 1st Prize across Healthcare Domain at 24h Hackathon.

Skill Summary

- Primary Stack: JavaScript, TypeScript, Python, C++ , SQL (PostgreSQL, MySQL), HTML, CSS
- Frontend: React, Next.js, Vue, UI/UX, Angular, Tailwind CSS, React Testing Library
- Backend & Data: Node.js, REST, FastAPI, gRPC, GraphQL, WebSockets, Redis, Kafka
- Cloud & DevOps: AWS, MS Azure (basic), Docker, Kubernetes, CI/CD (GitLab CI, GitHub Actions, Jenkins)
- AI/LLM Engineering: OpenAI, LangChain, Embeddings, RAG pipelines, Vector search, agent workflows, Machine learning
- Tools & Practices: Git, Jira, Agile/Scrum, Unit Testing, Jest, JUnit, System Design, Code Review, Swagger, Postman, Confluence, Performance testing, Playwright

Languages (Spoken): German: A2, B1 in progress || English: C1
